

The ARRI is a learning and accountability instrument that provides an independent evaluation of the performance of IFAD operations

PROJECT SAMPLE OF THE 2015 ARRI

Project evaluations (including project performance assessments and project completion report validations) conducted by IOE since 2002

241

Total lending volume of evaluated project sample

% of funds evaluated that IFAD has lent for projects and programmes since 1978

US\$4 Bn

25%

MAIN HIGHLIGHTS

Positive results...

 $(\% \ of \ projects \ rated \ as \ moderately \ satisfactory \ or \ better, \ compared \ by \ year \ of \ project \ completion)$

IFAD's overall project achievement

Rural poverty impact

Gender equality and women's empowerment

Innovation and scaling up

Areas for improvement...

Natural resource and environmental management

More systematic environmental impact assessments needed and stronger partnerships with a broader range of institutions dealing with natural resources and environmental management

Non-lending activities (Policy dialogue, partnership-building, knowledge management)

Main inhibiting factors: setting over-ambitious objectives that are difficult to translate into operational plans; limited resources allocated to non-lending activities; and inadequate M&E

Operational efficiency

Several constraining factors, such as implementation period overruns and high project management costs

Monitoring and evaluation (M&E)

The incentive framework for effective and efficient M&E activities needs strengthening and dedicated budgets for M&E activities should be systematically included in project cost tables

LEARNING THEME: SUSTAINABILITY OF BENEFITS

Drivers contributing to promoting sustainability Another important area for improvement

Limiting factors constraining sustainability

Adequate integration of project objectives into national development strategies

Sustainability of benefits

of IFAD-supported projects

(% of projects rated as moderately satisfactory or better)

Weak assessment and

Absence of a sound financial and economic analysis during project design

Inadequate support to communities' and households' resilience to external shocks

Investment in communities' human and social capital through inclusive development activities and by promoting participation and empowerment of rural communities

Clear and realistic strategies for gender mainstreaming

Promotion of community-level ownership and responsibility

RECOMMENDATIONS

Sustainability

Promote better sustainability of benefits, through simpler design that carefully considers the country's policy and institutional context and embed exit strategies early on in the project life cycle

Ensure that key partners have the required incentives for promoting sound M&E and by allocating speci c budgets to M&E activities

Country strategies

Country strategic opportunities papers (COSOPs) should include specific indicators, targets and cost estimates especially for non-lending activities.

2016 learning theme

Knowledge management is proposed to be selected as the learning theme for the 2016 ARRI, with a particular emphasis on how operations can learn to improve performance.
