Remittances, investments and the Sustainable Development Goals
In 2015, Member States of the United Nations issued a call to action to eradicate global poverty, reduce economic inequality and place the world on a more sustainable pathway: the 2030 Agenda for Sustainable Development. This comprehensive undertaking affirms the need to reach 17 specific Sustainable Development Goals (SDGs) and proposes several ways to mobilize the additional resources required to realize this ambitious – but achievable – agenda. Of these, SDG 10 specifically refers to safe migration.

For more than a century, people have been moving from rural to urban areas, and across national borders in search of better opportunities. Approximately 200 million migrant workers leave home in order to send remittances, with the aim of giving 800 million family members the chance to remain home and address the root causes of their own migration.

Therefore, helping remittance families leverage the development impact of their own resources is vital to reach the SDGs. The international community may now recognize migrant workers and their families as agents of change and key partners in this effort.

The potential for synergy in connecting the scale of remittances to reach the SDGs is clear: one billion senders and receivers and a projected US$3.5 trillion in international remittances will be sent to developing countries between 2015 and 2030.

Over the last decade, attention has focused primarily on the “sending side” of remittances, particularly the aggregate volumes and transaction costs of sending family remittances, essentially from developed to developing countries. The global dimension of this phenomenon is impressive: US$529 billion were sent to developing countries in 2018, more than three times official development assistance (ODA) and beyond foreign direct investment. It is estimated that 75 per cent of remittance flows go towards immediate needs, but the other 25 per cent – over US$100 billion per year – is available for other purposes.

Despite the focus on the aggregate flows of remittances, the amount that matters the most is not measured in millions or billions, but in the individual US$200 or US$300 sent home regularly. This amount represents 60 per cent of total household income and, if leveraged, it can most effectively improve the living standards of migrants and their communities back home.

Remittances can contribute to reaching the SDGs in a variety of ways:

1. At household level. By recognizing the positive socioeconomic impact of remittances on families’ wellbeing (SDGs 1-5);
2. At community level. By supporting policies and specific actions to promote synergies between remittances and financial inclusion, encourage market competition and regulatory reform, and mitigate any negative impact resulting from climate change (SDGs 6, 7, 8, 10, 12 and 13); and

With these apparently small funds, most remittance families commit to reaching “their own SDGs” – reduced poverty, better health and nutrition, education opportunities, improved housing and sanitation, entrepreneurship, financial inclusion and reduced inequality, and the ability to deal with the uncertainty in their lives by increasing their savings and building assets to ensure a more stable future.

In this regard, the SDGs provide a unique opportunity to create a convergence between the goals of remittance families, government development objectives, private sector strategies to tap underserved markets, and the traditional role of civil society to promote positive change. In particular:

(i) Financial inclusion and literacy for remittance recipient families can increase opportunities for formal savings and investment. In turn, these mechanisms can build the human capital of remittance families and improve their living standards through better education, health and housing.

(ii) Migrant investments beyond remittances can change the development landscape of local communities, if given appropriate options.

(iii) Remittance markets improved through an adapted legal and regulatory framework, greater transparency and competition can lower cost and provide more resources to remittance families.

As private flows, migrant remittances do not in any way reduce or supplant the need for additional resources, both public and private. However, the potential development impact of migrant remittances and investments can only be fully realized in partnership with coherent and realistic public policies and priorities coupled with private-sector initiatives.

The Global Compact for Safe, Orderly and Regular Migration, adopted in December 2018, and its Objective 20 in particular, represents an opportunity to build on the growing recognition that the remittances sent by migrants to their families back home are fundamental for governments, international organizations and other partners in realizing their sustainable development objectives.

Remittances help reach the SDGs: One family at a time

Remittances can contribute to reaching the SDGs in a variety of ways:

1. At household level. By recognizing the positive socioeconomic impact of remittances on families’ wellbeing (SDGs 1-5);
2. At community level. By supporting policies and specific actions to promote synergies between remittances and financial inclusion, encourage market competition and regulatory reform, and mitigate any negative impact resulting from climate change (SDGs 6, 7, 8, 10, 12 and 13); and

3. At international level. By ensuring that the revitalized Global Partnership for Sustainable Development – as outlined in SDG 17 – and the Global Compact on Migration promote collaboration across all sectors involved in remittances.
At the household level: SDGs 1-5

SDG 1
End poverty in all its forms everywhere

- On average, remittances represent up to 60 per cent of recipient families’ income, and typically more than double a family’s disposable income and help deal with uncertainty, allowing them to build assets.
- Analyses of 71 developing countries show significant poverty reduction effects of remittances: a 10 per cent increase in per capita remittances leads to a 3.5 per cent decline in the share of poor people in the population.

**Recommended actions**
- Promote affordable and safe access to remittances from the first to the last mile, particularly in rural areas, which receive 40 per cent of all flows and where remittances count the most.
- Provide value-added financial and non-financial services to remittance families to facilitate productive investment of their funds and further build assets for a more secure future.

SDG 2
End hunger, achieve food security and improved nutrition and promote sustainable agriculture

- In rural communities, half of remittances are spent on agriculture-related expenses.
- Additional income increases receiving households’ demand for food, which increases domestic food production and improves nutrition, particularly among children and the elderly.
- Investment of migrants’ income in agricultural activities creates employment opportunities.

**Recommended actions**
- Expand and leverage the ability of remittance families to invest and engage directly in agricultural production, leading to improved food security. This can be achieved by strengthening the capacity of rural financial and non-financial service providers, particularly by promoting services for agricultural production.

SDG 3
Ensure healthy lives and promote well-being at all ages

- Remittances invested in health care – access to medicine, preventive care and health insurance products – improve the health and well-being of recipient families.
- Infants born into remittance families have a higher birthweight and are less likely to die during their first year.

**Recommended actions**
- Develop incentives for enhanced health insurance products and improved channels of distribution customized to the needs of remittance families, including the possibility for migrant workers to directly pay premiums for their families.
- Facilitate the portability of pension rights for migrant workers to their countries of origin.
- Further mainstream psychosocial support into financial education programmes for migrants and families during pre-departure and post-migration, to help alleviate the negative effects of family separation.

SDG 4
Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

- One of the main reasons migrants send money home is to ensure access to better education for their children.
- Remittance-receiving households have demonstrably better educational participation than non-recipients, and invest about one tenth of their income educating their children.
- Remittances lead to almost doubling school enrolment. Children from remittance families, especially girls, register higher school attendance, enrolment rates and additional years in school.
- Remittances substantially reduce the probability of child labour participation.

**Recommended actions**
- Facilitate the ability to save regularly on both the sending side and receiving end to pay for education fees back home, including direct bill payments from abroad to cover education expenses, among others.
At the household level: SDGs 1-5

SDG 5
Achieve gender equality and empower all women and girls

- Women migrant workers now comprise half of all remittance senders: 100 million in total.
- Remittances transform the economic role of women both on the sending side and receiving end through financial independence and better employment opportunities.
- While women remit approximately the same amount as men, women tend to send a higher proportion of their income regularly and consistently, even though they generally earn less than men.

RECOMMENDED ACTIONS
- Recognize that 50 per cent of all migrant workers are women and empower them to overcome the traditional bias against financial independence and control.
- Invest in advisory services for women to meet entrepreneurial aspirations, improve income management and ultimately enable family reunification.
- Expand gender-sensitive financial services and sensitize remittance service providers (RSPs) on gender and migration dynamics.

SDG 6
Ensure availability and sustainable management of water and sanitation for all

- To create social capital and pool funds to address local needs, migrants and/or their families often organize themselves into neighbourhood organizations in their communities or through Hometown Associations (HTAs) abroad.
- HTAs identify development priorities and participate in their achievement though technical advice and fund-raising.
- Projects take into account sustainability concerns and community welfare based on primary needs (e.g. the provision of irrigation and clean water infrastructure)

RECOMMENDED ACTIONS
- Support social capital with migrant groups that facilitate pooling of funds to sustain investment in water and sanitation infrastructure in their places of origin.
- Promote partnerships between local authorities and migrant groups and/or HTAs towards identifying water and sanitation priorities, and join design and fund-raising efforts for project implementation.
- Create incentives for remittance families to invest in sustainable agricultural irrigation infrastructure that efficiently manages water resources.

SDG 7
Ensure access to affordable, reliable, sustainable and modern energy for all

- Remittances have a positive impact on family assets and overall quality of life when invested in housing, and they are more likely to be used for home improvements than for home purchases.
- Affordable solutions for poor households and their communities are already available, including efficient cooking devices and clean energy solutions.
- Local community projects may apply clean energy technologies, particularly relevant in remote rural areas lacking access to electricity.

RECOMMENDED ACTIONS
- Promote the use of remittances for financing household solar energy projects, which could be expanded to the community with the support of funding from the public sector (at local and national levels), the private sector and IFIs.
- Create incentives to support remittance families to invest in clean energy ventures to distribute solar power systems or affordable equipment using sustainable and affordable sources of power.

At the local level: SDGs 6, 7, 12 and 13

SDG 6
Ensure availability and sustainable management of water and sanitation for all

- To create social capital and pool funds to address local needs, migrants and/or their families often organize themselves into neighbourhood organizations in their communities or through Hometown Associations (HTAs) abroad.
- HTAs identify development priorities and participate in their achievement though technical advice and fund-raising.
- Projects take into account sustainability concerns and community welfare based on primary needs (e.g. the provision of irrigation and clean water infrastructure)

RECOMMENDED ACTIONS
- Support social capital with migrant groups that facilitate pooling of funds to sustain investment in water and sanitation infrastructure in their places of origin.
- Promote partnerships between local authorities and migrant groups and/or HTAs towards identifying water and sanitation priorities, and join design and fund-raising efforts for project implementation.
- Create incentives for remittance families to invest in sustainable agricultural irrigation infrastructure that efficiently manages water resources.

SDG 7
Ensure access to affordable, reliable, sustainable and modern energy for all

- Remittances have a positive impact on family assets and overall quality of life when invested in housing, and they are more likely to be used for home improvements than for home purchases.
- Affordable solutions for poor households and their communities are already available, including efficient cooking devices and clean energy solutions.
- Local community projects may apply clean energy technologies, particularly relevant in remote rural areas lacking access to electricity.

RECOMMENDED ACTIONS
- Promote the use of remittances for financing household solar energy projects, which could be expanded to the community with the support of funding from the public sector (at local and national levels), the private sector and IFIs.
- Create incentives to support remittance families to invest in clean energy ventures to distribute solar power systems or affordable equipment using sustainable and affordable sources of power.
**Remittance families’ contribution**

- **SDG 12**: Ensure sustainable consumption and production patterns
  - As remittance families increase their purchase capacity and change their consumption patterns, they can do so by meeting individual needs and aspirations within the ecological limits of the planet.
  - Migrant households are regular and heavy consumers of nostalgic goods (homecountry products).
  - Trade of nostalgic goods and diaspora tourism imply significant revenue for countries of origin. Diaspora populations can act as a bridge to broader markets of nostalgic goods and local tourism.

  **Recommended actions**
  - Develop awareness-raising programmes in remittance-receiving communities on the suitability of adopting environmentally-friendly consumption patterns and prioritizing productive investment over luxury spending.
  - Promote the investment of remittances in family and community projects of sustainable and agro-tourism which, in addition to creating decent jobs, would foster local culture, handicrafts, agro-biodiversity and gastronomy.

- **SDG 13**: Take urgent action to combat climate change and its impacts
  - Migration is increasingly becoming a consequence of climate change. Remittances and diaspora investment play a crucial role in mitigating its negative impacts and helping cope with income shortages due to weather-related shocks.
  - Remittances enable the adoption of more sustainable crops and non-farm activities. Examples include: support to local enterprises to provide solutions for flood control, more efficient use of water, improved irrigation systems, storm/heat/wind-resilient building materials, among others.

  **Recommended actions**
  - Support local financial institutions’ development and provision of remittance-related, weather-based insurance products to migrant families in rural areas.
  - Encourage investment from migrant groups in local enterprises offering products and services designed to better manage exposure to climate-related risks, such as drought and water shortages, floods and storm surge, heat waves, cyclonic winds, shifting precipitation patterns, wildfires and invasive pests, among others.

- **SDG 8**: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
  - Money held by remittance-receiving families and migrants’ savings in host countries improve financial resources available to the general economy. This capital can be maximized when coupled with financial and entrepreneurial services.
  - Migrant workers possess tremendous assets: knowledge, skills and networks.
  - In terms of development impact, migrants’ investment in micro, small or medium enterprises effectively generates employment and income in local communities.

  **Asset-building and savings**
  - Recognize that the financial inclusion of tens of millions of remittance families represents a major opportunity to multiply economic impact in individual households, communities and the financial system as a whole.
  - Create incentives for the private sector to expand adapted services linked to remittances and offer savings products to a large underserved population.
  - Promote financial education as a central pillar of financial inclusion to stimulate the uptake of financial services by migrant workers, refugees and their families.

  **Diaspora investment**
  - Acknowledge the transformative effect of diaspora investment and recipients’ savings on their livelihoods and communities, stimulating employment and income-generating opportunities, with the highest impact in rural areas.
  - Expand and adapt financial and entrepreneurship development services to allow migrant workers to invest directly or through investment vehicles into SMEs in their home countries.
• Reducing the cost of remittance transfers can substantially increase disposable income for remittance-receiving families.
• By reducing average costs to 3 per cent globally, remittance families would save an additional US$20 billion annually.
• Civil society awareness raising and information campaigns are achieving progress in promoting better working conditions for migrant workers.

Enabling environment and regulations
• Adapt regulations that are commensurate to relatively low-value transactions to avoid excessive, counterproductive and costly processes.
• Recognize that “de-risking” practices used by global financial institutions effectively deny many remittance companies access to the financial system, threatening their existence as well as the ability of migrant workers to send money home to their families, particularly those living in fragile situations.
• Acknowledge that exclusivity agreements continue to limit competition and cost reduction, particularly in many countries served by low-volume corridors and into rural areas.
• Understand that taxing family remittances is counterproductive, as it incentivizes informal transfer systems.
• Increase market transparency by empowering end-users with accessible information on costs, claim process disclosures, new channels for sending money and additional services.
• Develop national “whole-of-government” remittance plans in recipient countries to fully assess the opportunities represented by remittances and migrant investments in their local economies.
• Support the expansion of the remittance and diaspora investment markets and related services through the provision of public and accurate data at macro, meso and micro levels.

Competition and cost
• Encourage RSPs on both sides of remittance corridors to incorporate competitive business models, and invest in more cost-effective and inclusive distribution channels and products, leading to lowering transaction costs to the SDG goal of 3 per cent.
• Support a proportional and predictable enabling environment for technological innovators such as FinTechs, mobile network operators and nonbank financial institutions to enter this market, reach the last mile and link financial services to remittances.

The international community – in line with SDG 17 – is committed to working together in order to leverage the development impact of remittances.

• Through initiatives such as the Global Compact for Safe, Orderly and Regular Migration, the international community now recognizes remittances as a vital support for hundreds of millions of people across the globe and works to strengthen their development impact on families and communities.

• Promote policy coherence among government institutions to create synergies across national priorities that integrate migrant workers and their contributions into national development plans.
• Promote public-private partnership approaches that stimulate client adoption of new technology-driven systems to change the cash habits particularly in the underserved, rural and remote areas.
• Support the adoption of the International Day of Family Remittances (IDFR) in recognition of the fundamental contribution of migrant workers to their families and communities back home, and to the sustainable development of their countries of origin.

As part of this effort, every year the international community celebrates the International Day of Family Remittances (IDFR), formally adopted by the United Nations General Assembly in 2018. Since its first observance in 2015, the IDFR saw an unprecedented support by over 40 governments, several United Nations agencies, and the private sector, including over 100 Money Transfer Operators, 800 mobile companies, 6000 savings and retail banks across 80 countries and over 100 emerging payments companies.
International Fund for Agricultural Development (IFAD)

IFAD is an international financial institution and a United Nations specialized agency dedicated to eradicating poverty and hunger in the rural areas of developing countries. Through low-interest loans and grants to governments, IFAD builds and finances poverty reduction programmes and projects in the world’s poorest communities. Seventy-five per cent of the world’s poorest people, almost one billion women, men and children, live in rural areas of developing countries and depend on agriculture and related activities for their survival. IFAD focuses on poor, marginalized and vulnerable rural people, enabling them to access the assets, services and opportunities they need to overcome poverty. IFAD works closely with governments, other United Nations agencies, donors, non-governmental organizations, community groups and rural poor people themselves.
