The Sustainable and Water Land Management Project is currently financed by the GEF and in-kind contribution from the Government of Ghana. The project implementation started in May 2011, with a first additional financing in May 2014. The proposed child IAP project will be considered as an Additional Financing, building on the enabling existing systems, structures, and capacities developed under the SLWMP to improve food security using a landscape/ecosystem approach.

OBJECTIVES

The project is seeking to scale up activities to facilitate implementation on a larger geographic scale and expand the range of sustainable land and water management interventions in Northern Ghana. The activities are based on the landscape approach in Upper Ghana’s savanna, which is characterized by vulnerability, low climate resilience, and high poverty. The project builds on previous GEF investments in the region, which has benefited over 24,000 people and helped to reinforce national capacities in spatial planning and implement local platforms at watershed and community levels. In addition, Community Resource Management Areas were designed and managed for sustainable natural resource management in wildlife Corridors and the protection of the Gbele Resource Reserve was reinforced with management planning and training activities. The current project under the IAP Program is intended to help the government harness existing systems, structures, and capacities developed to further improve food security using a landscape/ecosystem.
KEY COMPONENTS

The IAP support is structured around the following components in line with the IAP program framework: (i) integrated spatial planning; (ii) land and water management (systems, capacity, and monitoring for sustainable land and water management (SLWM)); (iii) implementation of SLWM in micro-watersheds (sub-projects), including national SLWM and Payment for Environmental Services monitoring, and management of riparian and other biological corridors.

STAKEHOLDERS ENGAGED

Preparation of the project included extensive consultations with a wide range of stakeholders and it continues during implementation. The project is implemented by the Ministry of Environment, Science, Technology and Innovation (the project coordinating entity) jointly with the Ministry of Food and Agriculture, Environmental Protection Agency, Wildlife Division (of the Forestry Commission) and Forest Services Division (of the Forestry Commission). At the national level, the project engages the National Sustainable Land Management Committee which is responsible for providing overall guidance for implementation of the Ghana Strategic Investment Framework [for SLM] funded through the Terrafrica Program. Target beneficiaries to be engaged is expected to increase from a baseline of about 30,000 in 2016 to 60,000 in 2020, with women making up 40% of this group.

EXPECTED IMPACTS

Capacity Building for Integrated Spatial Planning.

Integrated spatial development framework produced for Northern Savannah zone.

Land and Water Management

244 communities with community watershed development plans

1,060 ha. within target forest reserves reforested

72,716 ha. brought under sustainable management plans

347 community governance structures established, trained and operational.

INNOVATIVENESS

The Ghana SLWM project supports a comprehensive landscape approach to sustainable land and watershed management at the community level with planning activities management of ecosystems at the landscape level with improved food security and poverty reduction at community level. This is expected to generate triple-win situations that combine agricultural productivity increases with enhancement of ecosystem services and improvements of livelihoods, incomes, and food security. Significantly, the project combines elements of sustainability through supporting post-harvest management improvements as part of the value chain work and further reducing pressures on common pool resources by providing additional support to non-destructive uses of forests, including through use of the NTFPs. Strategic planning, government commitment and long term engagement in natural resources management is providing a strong basis for innovation in Ghana.

GLOBAL ENVIRONMENTAL BENEFITS

<table>
<thead>
<tr>
<th>Land under integrated and sustainable management (M ha.)</th>
<th>1,000,000</th>
