SENEGAL
Agricultural Value Chains Support Project

CONTEXT

Senegal is facing significant constraints within the agricultural sector resulting from (i) climate variability; (ii) land degradation, increasing pressures on natural resources and leading first to overexploitation of forests, ecosystems and land, and ultimately to salinization and acidification of arable land; (iii) stagnation of yields related to land degradation and weak technological innovations; and (iv) difficult access to credit, quality inputs and agricultural equipment. Through the Agricultural Value Chains Resilience Support Project (PAFA-E), the Government of Senegal is tackling these challenges by promoting sustainable improvement of family farms in the groundnut basin and silvo-pastoral regions. The specific objective of the project is to sustainably improve food security and incomes of smallholder farmers (crop and livestock), and to create sustainable and remunerative employment for rural people, especially youth and women.

KEY COMPONENTS

To deliver global environmental benefits at scale, critical points in the causal chain of environmental degradation where GEF support can achieve maximum impact have been identified: (i) convening of multi-stakeholder alliances that bring together stakeholders from the public and private; sectors, donors, scientific community and civil society; (ii) demonstrating innovative approaches in integrated natural resources management and promote their scaling-up; and (iii) strengthening institution-
At national level, the major stakeholders include the Ministry of Agriculture and Rural Equipment, Institut de technologie alimentaire (Institute of Food Technology); Le Commissariat à la sécurité alimentaire, Agronomes et vétérinaires sans frontiers; L'Institut national de pédologie, innovation, environnement, développement; Le Centre de suivi écologique; Agence nationale de conseil agricole et rural (National Agricultural and Rural Advisory Agency); National Renewable Energy Agency; and the Office for Rural Boreholes. Other major stakeholders include the National Agricultural Credit Fund of Senegal to support rural finance, and service providers for agriculture and livestock farming. The project will engage around 52,500 people (5,250 households) as beneficiaries in vulnerable communities across the targeted agro-ecological zones, of which about 40% are women and youth.

STAKEHOLDERS ENGAGED

At national level, the major stakeholders include the Ministry of Agriculture and Rural Equipment, Institut de technologie alimentaire (Institute of Food Technology); Le Commissariat à la sécurité alimentaire, Agronomes et vétérinaires sans frontiers; L'Institut national de pédologie, innovation, environnement, développement; Le Centre de suivi écologique; Agence nationale de conseil agricole et rural (National Agricultural and Rural Advisory Agency); National Renewable Energy Agency; and the Office for Rural Boreholes. Other major stakeholders include the National Agricultural Credit Fund of Senegal to support rural finance, and service providers for agriculture and livestock farming. The project will engage around 52,500 people (5,250 households) as beneficiaries in vulnerable communities across the targeted agro-ecological zones, of which about 40% are women and youth.

GLOBAL ENVIRONMENTAL BENEFITS

The setting up of a financial window on sustainable land and environmental management (SLM)/resilience through the National Agro-sylvo-pastoral Development Fund. These efforts would support and help finance the scaling-up of best practices and encourage sustainability.

EXPECTED IMPACTS

Multi-stakeholder platforms integrate environmental degradation issues and climate variability in development actions.

PARFA will support education and training of key actors on issues of resilience and environmental sustainability through 2 national workshops and 20 regional workshops, bringing together 2,500 people.

Resilience of smallholder farmers improved.

Development of 450 ha. of valleys for the cultivation of rice and market gardening.

Rehabilitation of 6 dykes to protect against 300 ha. of land salinization.

Soil water conservation works and soil protection on 800 ha. of exposed land.

Rehabilitation of mangroves over an area of about 1,000 ha. in the Saloum Delta.

Support the installation and training of 20 solar pumping systems on 20 ha. of market gardens.

A mechanism for the monitoring and evaluation of environmental impacts and food security is functional.

The Ecological Monitoring Centre (CSE) will address the implementation of an information system.

INNOVATIVENESS

A key innovative element of the project is the systematic integration of resilience assessment into program activities. Efforts in scaling-up will be made by capitalizing on the demonstrative nature of the project (e.g. replicable models of renewable energy, integrated production systems). Efforts will also be made to promote
