Key results of CCRIP impact assessment
Coastal Climate Resilient Infrastructure Project

Bangladesh

**Project objectives**
To improve market access through climate-resilient roads and markets in poor, remote and climate-vulnerable areas

**Inputs and activities**
1. Strengthened community markets
2. Construction of flood-resilient market-connecting roads
3. Training and employment of destitute women through Labour Contracting Societies

12 Districts covered (across 3 divisions)

2013-2019

- **+11%** Total income per capita per year
- **+104%** Crop sales income per year
- **+5%** Durable assets

- **+8%** Likelihood of growing a high-value crop
- **+11%** Likelihood of selling crops at market rather than at home or at farm gate
- **+13%** Food security

¹Expected by completion
Lessons learned

Market access
Better market access increased beneficiaries’ income in both the dry and monsoon seasons, as well as their likelihood of selling crops in the market.

Evidence of pro-poor impact
Larger impacts were found on poorer households located farther from the connecting road.

Women’s empowerment
Mixed impact suggests that some barriers continue preventing their participation in the economy, calling for household level interventions for increased impact.
