Key Rating Drivers

SCP Underpins Rating: International Fund for Agricultural Development's (IFAD) 'AA+' Long-Term Issuer Default Rating (IDR) is anchored on its Standalone Credit Profile (SCP). IFAD's SCP assessment is driven by its solvency (aa+) and liquidity (aa+) profiles, which are unchanged from last year. The medium-risk business environment does not translate into any notch adjustment to the rating. Fitch Ratings' assessment of IFAD's shareholders' capacity and propensity to support does not provide any uplift above our assessment of its SCP.

IFAD13 Replenishment: IFAD's main financial resources are contributions from its member states, paid through three-year replenishment cycles, with the most significant contributors the G8 countries, including the United States of America (AA+/Stable), Germany (AAA/Stable) and Italy (BBB/Stable). IFAD13, which runs from 2025-2027, is the largest in the fund's history at USD1.4 billion (IFAD12: USD1.3 billion) which reinforces our assessment of contributors' support to IFAD and its mandate.

Strategy Evolution Continues: IFAD's strategy has evolved as it has leveraged its balance sheet. This evolution is expected to continue into IFAD13 as the fund looks to lend directly to the non-sovereign sector (without a sovereign guarantee) on-balance sheet for the first time in its history. During IFAD13, there is an envelope of up to USD90 million (2.5% of the expected total programme) to lend on-balance sheet, although volumes are expected to remain low and the recipient borrowers are expected to have a moderate-to-low-risk credit profile.

'Excellent' Capitalisation Underpins Solvency: Fitch expects IFAD's equity/assets ratio will continue to far exceed the 25% 'excellent' threshold over the medium term. At end-2023, this ratio was around 75%. Our assessment is also supported by the fund's usable capital/risk-weighted assets (FRA) ratio, which also far exceeds the 35% 'excellent' threshold. IFAD is inherently loss-making, owing to its business model, but this is offset by the paid-in contributions it receives from its member states.

Credit Risk Assessment Unchanged: Non-performing loans (NPLs) were 2.3% of total loans at end-2023, a slight increase from end-2022 (2.1%) as Cuba (0.2% of loans) is now in arrears to the fund. At June 2024, there were five sovereigns classified as NPLs for IFAD (North Korea, Lebanon, Venezuela, Yemen, Cuba). In line with IFAD's expectations, Fitch forecasts NPLs will increase from a 'low' level (below 3%) to a 'moderate' level (3%-6%) in the medium term.

'aa+' Liquidity Assessment: Liquidity is a rating strength for IFAD, with the liquidity profile assessed at 'aa+', unchanged from last year's review. The quality of IFAD's treasury asset portfolio has improved over the past 24 months, with an increased share of 'AAA' to 'AA' rated treasury assets (2023: 88% vs. 2022: 78%). IFAD's liquidity buffer is substantial. At end-2022 its coverage of short-term debt by eligible liquid assets was well above 1,000%, far above the 150% 'excellent' threshold outlined in the criteria.

Diversification of Funding Sources Continues: Fitch assesses IFAD's access to capital markets as 'weak', unchanged from previous reviews. This principally reflects the fact that IFAD has not issued a public, benchmark security in its history and Fitch does not expect the fund to do so in its baseline rating scenario across the forecast period. But IFAD does continue to diversify other funding sources. In 2024 the fund has issued four sustainable private placements including issuance in two new currencies (Swedish krona and Australian dollar).

Rating Derivation Summary

	Standalone credit profile (SCP)					Support			
	Solvency	Liquidity	Lower of solvency and liquidity	Business environment (+3/-3 notches)	Final SCP	Capacity	Propensity (+1/-3 notches)	Support adjustment (up to 3 notches)	Final rating
IFAD	aa+	aa+	aa+	0	aa+	AA-	0	0	AA+

Rating Sensitivities

Factors that Could, Individually or Collectively, Lead to Negative Rating Action/Downgrade

- **Solvency (Risk):** Worse-than-expected deterioration in the fund's risk profile, stemming from a higher loan impairment ratio (above 6%) and/or weaker average credit quality of the loan portfolio.
- **Business Environment (Business Profile):** A deterioration in the fund's business profile, which could lead to a negative revision of our current 'low' risk assessment. For example, this could stem from any potential weakening in our assessment of the fund's strategy risk in the context of the transition towards a more levered balance sheet.
- **Solvency (Capitalisation**): A marked decline in the capitalisation ratios relative to recent historical performance. This could be driven by significant losses, rapid growth in banking operations relative to donor replenishments and/or significant increase in risk-weighted assets affecting the FRA ratio.

Factors that Could, Individually or Collectively, Lead to Positive Rating Action/Upgrade

- **Solvency (Risk):** Resilience of the loan portfolio, resulting in a stronger credit risk profile than currently anticipated, particularly an improvement in the fund's loan impairment ratio relative to Fitch's expectations, to a level commensurate with a 'very low' assessment and an improvement in the average rating of the loan portfolio.
- **Liquidity (Access to Capital Markets)**: An improvement in our assessment of IFAD's access to capital markets (currently 'weak') following regular public issuance under the euro medium-term note programme could lead to a positive adjustment to the liquidity assessment.
- Given the solvency and liquidity assessments are at the same level (aa+), they would both need a positive revision to result in any upward rating pressure on the Long-Term IDR.
- **Business Environment (Business Profile):** Improvement in our assessment of IFAD's business profile, driven by a successful transition towards a gradual increase in leverage, diversification of funding sources and exposure to middle-income borrowers, while adhering to the revised risk management framework.

Business Environment

Our overall assessment of IFAD's Business Environment is 'medium risk', which balances a 'low' risk business profile and a 'high' risk operating environment.

Brief Issuer Profile

Formed in December 1977, IFAD is a specialised UN Agency and the only multilateral development institution focused exclusively on transforming remote, rural economies and food systems. Most of the world's poorest and hungry people live in rural areas, and IFAD invests in rural areas to promote prosperity, food security and economic resilience to local communities. IFAD provides loans (mainly on concessional terms) and grants to developing countries.

Headquartered in Rome, IFAD has a well-diversified shareholder base, with 178 member countries. IFAD's largest contributors are the US, United Kingdom, Germany, Netherlands and Italy. Ukraine is expected to become the 179th member country.

Unlike most other multilateral development banks (MDBs) that Fitch rates, IFAD does not have capital (paid-in or callable). Instead, it is supported through pledges from its members every three years through replenishment cycles.

Business Profile

Fitch assesses IFAD's business profile as 'low' risk to reflect the following:

At end-2023, IFAD's total banking portfolio (including loans, equity participations and guarantees) was USD8.6 billion. This is assessed as a 'medium risk' in line with the threshold of total banking exposure (TBE) between USD5 billion and USD30 billion, as outlined in the criteria.

The main governance structure of IFAD is unchanged from last year and is as follows:

- IFAD's member states have the ultimate decision-making power on all matters including policy, finances and membership.
- Member states govern IFAD through the governing council (IFAD's main decision-making body open to all member states), which meets annually, and the executive board (consisting of a subset of member states responsible for overseeing the general operations of IFAD and for approving its programme of work), which meets three times a year. The executive board consists of 18 members: eight member states from list A, four member states from list B and six member states from list C.
- The president chairs the executive board and is responsible for overall management of the fund. The president is selected by the member states on a four-year term that is renewable once.

Voting rights are divided between two types of vote, membership and contribution votes. Membership votes are allocated on the basis of membership of the fund, with each member receiving an equal number of shares. "Contribution" votes are allocated according to each member state' payments to IFAD's replenishment programmes.

While IFAD operations continue to predominantly focus on sovereigns (typically seen as lower risk than the non-sovereign sector), its business model means it is inherently loss-making and, unlike most MDBs, which make a small profit and accumulate reserves, IFAD makes continual losses and builds up an accumulated deficit. IFAD's business model factors this in as the fund regularly receives paid-in contributions from shareholders in the form of loss-absorbing equity. However, this exposes IFAD to political and operational risk of continued receipt of these additional contributions every three years. For that reason, IFAD's overall strategy is deemed 'medium risk'.

Non-sovereign exposure accounted for 0% of IFAD's total banking exposure at end-2023. Although this is expected to increase, it will only do so at a very gradual pace – and is only forecast to be 0.1% of outstanding loans at end-2026. As such, we treat this as a 'low risk' within our rating framework – with the 'low risk' threshold being less than 10%, as outlined in the criteria.

IFAD is recognised as a specialised UN agency and is seen as important for its shareholders to support key development goals set by the international community. Given IFAD is a well-recognised, specialised UN agency and is the only international financial institution specifically focused on global food security, we view the importance of the mandate as 'low risk'.

Operating Environment

Fitch assesses IFAD's operating environment as 'high risk', reflecting the following.

- The non-weighted average rating of IFAD's countries of operation is 'B-', driven primarily by the sovereign ratings of the heavily indebted poor countries to which IFAD extends its financing options. A large portion of IFAD's countries of operations are unrated by Fitch, Moody's or S&P. In line with our approach across the MDBs portfolio, we assign a 'high risk' to IFAD's credit quality of the countries of operation.
- Income per capita in the countries of operations is assessed as 'high risk'. Using World Bank Indicators, IFAD's average GDP per capita in its countries of operations was USD3,803 in 2022, lower than that of the OPEC Fund (USD7,165), which is assessed 'medium risk'.
- Overall political risk and business climate in the countries of operations is 'high risk'. When looking at peers, using World Bank data on a percent rank basis, IFAD's profile is more closely aligned with a 'high risk' profile, rather than the 'medium risk' profiles of the International Bank for Reconstruction and Development (IBRD) or the Asian Development Bank.
- Political risk and business climate in the head office country is assessed as 'low risk'. Using World Bank indicators, this 'low risk' is commensurate with Italy relative to the head offices of other supranational issuers in our rated portfolio, such as the OPEC Fund (based in Vienna), which is also deemed a 'low risk' country of head office.

IFAD benefits from privileges and immunities from governments, as well as benefiting from preferred creditor status (PCS), given IFAD's majority sovereign loan book. IFAD is also recognised as an official UN Agency and benefits from privileges and immunities accordingly.

Solvency

Fitch assesses IFAD's overall solvency assessment at 'aa+'.

Capitalisation

Capitalisation is a clear strength for the rating, with an equity/adjusted assets ratio of 75% at end-2023.

We anticipate a deterioration in capitalisation driven by a mild increase in lending (around USD1 billion over the coming three years) and a relatively stable level of equity, with the inherently loss-making structure of IFAD offsetting the paid-in contributions it receives from shareholders. This forecast of around 70% is significantly higher than the 25% 'excellent' threshold in the criteria.

Fitch's usable capital to risk-weighted assets ratio (FRAR): Usable capital includes shareholders' equity plus a portion (10%) of callable capital subscribed by shareholders rated 'AAA'/'AA'. Weighted assets include loans, guarantees, equity participations and other assets. Weights follow the Basel Committee's Standard Approach.

For MDBs providing concessional loans, Fitch applies a negative adjustment to members' equity for the computation of the usable capital to risk-weighted assets ratio. This adjustment reflects the opportunity cost incurred by the MDB for extending loans at a rate below the 'risk-free' rate (the yield on US Treasuries) for an equivalent maturity. It is based on the characteristics of the concessional loans granted by the fund, in particular the interest rate, maturity and length of the grace period.

For IFAD, the FRAR was calculated at 64.5% at end-2023. Similar to our expectations for the equity/assets ratio, we also forecast a slight deterioration of the FRA to around 55%–60% over the medium term, still comfortably above the 35% 'excellent' threshold outlined in the *Supranationals Rating Criteria*.

Risks

Risks Assessment

Indicative value	Risk level
Credit risk	Moderate
Concentration	Low
Equity risks	Very low
Market risks	Very low
Risk management policies	Strong

Source: Fitch Ratings

Our overall assessment of risks is 'low', which reflects the following:

IFAD has a well-diversified lending portfolio, with the average rating of loans at 'B'. This is unchanged from last year.

Over the past 15 years, 10 countries have reached non-accrual status with IFAD, most of which also defaulted at to other MDBs: Somalia (defaulted to the International Development Association IDA), Venezuela (Inter-American Development Bank), Yemen (Islamic Development Bank IsDB), Zimbabwe (IDA/IBRD/African Development Bank AfDB), Democratic Republic of Congo (IDA) , Guinea Bissau (IsDB/AfDB). Zimbabwe (in arrears to IBRD) is current with its payments to IFAD.

When looking at preferred-creditor status (PCS), IFAD currently exclusively lends directly to sovereign borrowers, and its relative default rate using data from the past 10 years is low. Although IFAD expects to lend directly to the non-sovereign sector as part of IFAD13, the expected volumes are extremely low (less than1% of outstanding loans at end-2026). As such, we make a '+3' notch adjustment to IFAD's average rating of loans, increasing the average rating from 'B' pre-PCS to 'BB' post-PCS adjustment.

As of June 2024, five sovereigns are in arrears greater than 180 days in IFAD's lending portfolio; North Korea (0.6% of portfolio), Lebanon (0.1%), Venezuela (0.1%); Yemen (1.5%) and Cuba (0.2%). These five impairments total 2.3% of total banking exposure, which in line with Fitch's criteria would equate to a 'low' risk assessment (1%- 3%).

When looking at the forecasts for NPLs, Fitch, in line with IFAD's expectations, assumes that over the forecast period, the NPL rate will rise above the 3% 'low' threshold, into the 'medium' risk assessment level. The loan portfolio is well diversified, with 109 sovereign borrowers.

According to Fitch's supranational rating criteria, IFAD's concentration risk is deemed to be 'low', as the fund's five largest exposures (China, India, Bangladesh, Ethiopia and Pakistan) account for 28% of total banking exposure. Fitch, in line with forecasts shared by IFAD, expects concentration to remain constant over the coming years at approximately 30%. The 'low' risk threshold for concentration is between 20%–40%, so IFAD is quite comfortably within this assessment level.

IFAD does not, nor do we expect it to, make any equity investments.

Interest Rate Risk: Although very limited, the introduction of borrowing activities generated potential interest rate risk. This is mitigated by ensuring that the lending terms of IFAD's financial liabilities are matched against the terms of on-lent funds.

Currency Risk: IFAD conducts its operations in various currencies. However, IFAD's currency risk is mitigated by ensuring that commitments for undisbursed loans and grants (mainly denominated in special drawing rights, SDRs) are supported by assets denominated in the SDR basket of currencies. Fluctuations in the USD/SDR exchange rate create a degree of volatility in IFAD's accounts, as accounting records are in US dollars. This retranslation of assets between USD/SDR creates unrealised gains/losses in IFAD's income statement. However, over the past 15 years, exchange rate fluctuations have historically netted out. These are unrealised gains and losses and do not have repercussions on IFAD's financial stability.

IFAD's risk management framework is 'strong' and is based on two fundamental pillars: capital management and liquidity management.

IFAD has a very comprehensive set of internal policies that govern its risk management framework. IFAD's key financial policies relate to liquidity management (minimum liquidity ratio), capital adequacy policy and the integrated borrowing framework and are broadly in line with MDBs' peers best practices.

We assess IFAD's risk management as 'strong' rather than 'excellent' owing to the fact that as the fund transitions towards a more leveraged operating model over the medium term, new policies are being put in place, for which we do not have a record of the fund's operating performance.

Peer Comparison: Risks

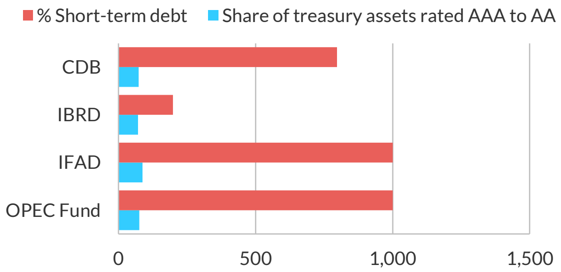
Access to capital markets and alternative sources of liquidity	Weak

Source: Fitch Ratings

Liquidity Buffers
At end-2023



IBRD at June 2023; CDB at 9M23
Source: Fitch Ratings, MDBs

Fitch assesses IFAD's liquidity at 'aa+'.

Liquid Assets to Short-Term Debt

Liquidity is a rating strength for IFAD.

As of 31 December 2023, IFAD had USD2,250 million of outstanding debt, of which only USD43 million was short term. The liquid assets portfolio was just over USD1.6 billion, so this liquidity buffer is comfortably within the 'excellent' threshold. Although we expect the fund's leverage to continue to increase in the coming years, it will remain at a negligible level and we continue to forecast the liquidity buffer will exceed 1,000%.

Quality of Treasury Assets

IFAD's treasury asset portfolio consists mostly of highly rated, low yielding, liquid instruments. The currency composition includes mostly U.S. dollars and euros. The investment policy stipulates that each investment must be rated at least 'A-'.

The relative share of 'AAA' to 'AA' rated treasury assets has increased to 88.1% at end-2023 from 78.3% in 2022, particularly driven by IFAD's new investment policy statement of 2020. This made two main changes to the previous policy and has become active at the start of IFAD12.

- **Asset Quality:** Share of fixed-income investments in rating category 'AA-' and above should be at least 60%.
- **Rating Definition:** From the best rating to the minimum of two out of the CRA3s.

Access to Capital Market, Alternative Source of Liquidity

IFAD has not issued publicly on international capital markets.

Its main funding source continues to be its replenishment contributions from member states. However, IFAD is taking steps to further diversify its funding profile and borrowing instruments, and the fund expects to continue to issue private placements over the medium to long term as an additional borrowing instrument to complement bilateral loans.

In 2014, IFAD started leveraging its balance sheet by entering into bilateral loan agreements with two state-supported institutions, the French Development Bank and the German KfW Development Bank, and with Canada.

Most recently, in 2022, IFAD signed a EUR500 million loan with the European Investment Bank, of which EUR150 million had been drawn by September 2024.

In 2017, the fund introduced concessional partner loans (CPL), which are concessional loans from members that aim to follow the concessional features of IFAD's loans. The maturities of the CPLs are either 25 or 40 years, matching IFAD's blend and highly concessional loans. Under the CPL framework, later integrated into the integrated borrowing framework, IFAD has borrowed at highly concessional terms from three members, France, India and Finland. IFAD signed a new CPL with Finland in 2023 worth EUR30 million.

Fitch assigned a 'AA+' rating to IFAD's euro medium-term note programme in November 2021. Under this programme, IFAD has executed eight private placement transactions in the last three years.

As IFAD continues to transition to a hybrid funding structure, Fitch understands it will continue to issue private placements under its Sustainable Development Finance Framework to meet the funding targets of the continuing replenishment.

Peer Comparison: Liquidity

	IFAD (AA+)		IBRD (AAA)	OPEC Fund (AA+)	CDB (AA+)
	End-2023	Projection[a]	Jun-2023	End-2023	Sept-2023

Shareholder Support

IFAD's support rating is assessed at 'aa-'.

This assessment is anchored on the weighted average rating of IFAD's key contributors. An assessment of a 'strong' propensity to support the institution leads to a '0' notch adjustment on the average rating of key shareholders, resulting in an overall support rating of 'aa-'

Capacity to Provide Extraordinary Support

IFAD has no callable capital and so we do not consider the rating factor coverage of net debt by callable capital in our analysis.

Given the lack of callable capital, when assessing extraordinary support provided to IFAD by its contributors, we consider the weighted average rating of IFAD's key shareholders, which is assessed as 'aa-'. This assessment is one-notch lower than last year. Fitch defines key contributors as the largest contributors which cumulatively make up 50% of the fund's paid-in contributions.

With 11.2% of contributions to IFAD, the US is the fund's largest contributor, with the other key shareholders as Japan (6.4%), Germany (6.8%), Netherlands (6.3%), Italy (6.6%), United Kingdom (5.5%) and Canada (5.3%), which cumulatively make up more than 50% of shareholder contributions.

Propensity to Provide Extraordinary Support

Fitch views IFAD's member states' propensity to support as strong primarily based on the large paid-in capital subscription that its members sign up to every three years as part of the replenishment programme. In advance of the payment of contributions, all shareholders issue joint statements of support, confirming their willingness to continue to financially support IFAD.

Peer Comparison: Shareholder Support

Supranational

Credit-Relevant ESG Derivation

International Fund for Agricultural Development (IFAD) has 2 ESG rating drivers and 5 ESG potential rating drivers

- \+ International Fund for Agricultural Development (IFAD) has exposure to borrowers with limited access to external funding sources and/or extend concessional loans which, in combination with other factors, impacts the rating.
- International Fund for Agricultural Development (IFAD) has exposure to lack of supervision by an external authority and is not subject to banking regulation which, in combination with other factors, impacts the rating.
- International Fund for Agricultural Development (IFAD) has exposure to social pressure to provide support at times of crisis but this has very low impact on the rating.
- International Fund for Agricultural Development (IFAD) has exposure to risk around the execution/predictability of its strategy but this has very low impact on the rating.
- International Fund for Agricultural Development (IFAD) has exposure to board independence and effectiveness, ownership composition but this has very low impact on the rating.
- International Fund for Agricultural Development (IFAD) has exposure to quality of financial reporting and medium-term financial forecasts but this has very low impact on the rating.

How to Read This Page
ESG relevance scores range from 1 to 5 based on a 15-level color gradation. Red (5) is most relevant to the credit rating and green (1) is least relevant.
The Environmental (E), Social (S) and Governance (G) tables break out the ESG general issues and the sector-specific issues that are most relevant to each industry group. Relevance scores are assigned to each sector-specific issue, signaling the credit-relevance of the sector-specific issues to the issuer's overall credit rating. The Criteria Reference column highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis. The vertical color bars are visualizations of the frequency of occurrence of the highest constituent relevance scores. They do not represent an aggregate of the relevance scores or aggregate ESG credit relevance.
The Credit-Relevant ESG Derivation table's far right column is a visualization of the frequency of occurrence of the highest ESG relevance scores across the combined E, S and G categories. The three columns to the left of ESG Relevance to Credit Rating summarize rating relevance and impact to credit from ESG issues. The box on the far left identifies any ESG Relevance Sub-factor issues that are drivers or potential drivers of the issuer's credit rating (corresponding with scores of 3, 4 or 5) and provides a brief explanation for the relevance score. All scores of '4' and '5' are assumed to reflect a negative impact unless indicated with a '+' sign for positive impact.
Classification of ESG issues has been developed from Fitch's sector ratings criteria. The General Issues and Sector-Specific Issues draw on the classification standards published by the United Nations Principles for Responsible Investing (PRI), the Sustainability Accounting Standards Board (SASB), and the World Bank.

CREDIT-RELEVANT ESG SCALE
How relevant are E, S and G issues to the overall credit rating?

5	Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis.
4	Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors.
3	Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating.
2	Irrelevant to the entity rating but relevant to the sector.
1	Irrelevant to the entity rating and irrelevant to the sector.
